

CERESINE WAX (PHC 6826)

Ceresine Waxes are hydrocarbon mixtures produced mainly using paraffin and microcrystalline waxes. Ceresine Wax is a white, odourless and tasteless solid which is generally of lower melt point than Ozokerite Wax. In personal care applications it is used to modify viscosity in formulations and for its structure forming properties in softer lipstick systems.

Ceresine Wax also will help in binding and stabilizing the oil portion of an emulsion and can be used as a melt point modifier.

Like Ozokerite wax, Ceresine wax is also non toxic, non irritating and non hazardous. FDA Approved. Available in slab or pellet form. Packaging: 25 Kilo cartons/bags.

MP: 64 - 70°C

CP: 63 – 68°C

PEN: 9 – 13 (@ 25°C 0.1mm)
