Soy Container Wax 3442

Soy Container Wax 3442 is a 100% soy wax, creamy/white in colour with excellent glass adhesion characteristics.

3442 can be used as a standalone container wax or as a blend component and mixes well with other waxes, stearic acids or paraffin. Soy Container Wax 3442 is easy to work with and offers great hot and cold scent throw.

Ideal for both beginners and experienced candle makers.

INSTRUCTIONS FOR USE

1. Melt the wax to 10-15°C above melting point (see product info for melting point)
2. It is important to check that the wax is completely melted and transparent
3. After melting cool down to 52°C (+/- 5°C)
4. Pour into container
5. One or two pours may be required
6. Allow at least 48 hours to cure before burning

FACTORS INFLUENCING THE FINISHED LOOK OF THE CANDLE

Heating Temperature

If the wax has not been completely transparent, crystallisation may cause frosting. It may be heated temporarily as high as 88°C if powder dyes are being used, but higher temperatures may cause the wax to discolour.

Pouring Temperature

Varying the pouring temperature can cause changes in appearance after cooling. Containers and moulds should be at room temperature or higher. It is recommended that any fragrance is added just before pouring.

Cooling Temperature

Cooling too fast may cause wet spots and cracks. Cooling too slow may cause frosting. Smaller containers will cool more quickly, so a higher pour temperature of about is recommended.

Maximum Recommended Fragrance - 8%

Vegan Friendly

Supplied in 25 kilo cartons and packed with poly liner
